

Rounded Capacity Inequality (RCI): Capacity Cut for Subset S
Orange nodes = subset S; double-headed arrows = boundary arcs $\delta(S)$

$$S = \{1, 2, 3, 4\}, d(S) = 14, \lceil d(S)/Q \rceil = \lceil 14/10 \rceil = 2$$

Capacity Cut (RCI): $x(\delta(S)) \geq 2 \times 2 = 4$ (at least 4 arcs cross the dashed boundary)
