

# k-Path Cut: Path Through Customers Forcing Multiple Vehicle Trips

Yellow path nodes  $P=\{1,2,3\}$ ; red dashed = required boundary arcs

Path  $P = \{1, 2, 3\}$ ,  $d(P) = 14$ ,  $k = \lceil 14/10 \rceil = 2$

**k-Path Cut: at least 4 arcs cross  $\delta(P)$  — one "enter" and one "leave" per vehicle trip**
