

Parallel Composition: $L \nabla A = (L \circ A^{-1} \circ L^*)^{-1}$

Key Properties

(i) Composition: $(L \nabla A) \circ B = L \nabla (A \circ B)$

(ii) Associativity: $M \nabla (L \nabla A) = (M \circ L) \nabla A$

(iii) Extends infimal convolution to operators

(iv) Links conjugation and composition
