

Set Partitioning Matrix: Routes vs. Customers
(Each customer must be covered by exactly one route)

Customer	r1 c=18.0	r2 c=22.5	r3 c=12.0	r4 c=20.0	r5 c=19.5	r6 c=15.0
c1	1	0	0	1	0	0
c2	1	0	0	0	1	0
c3	0	1	0	1	0	0
c4	0	1	0	0	0	1
c5	0	0	1	0	1	0

Green=1 means the route covers that customer.
SP selects a minimum-cost subset of routes that covers each customer exactly once.
